

Move heavy loads on a wooden floor

AeroGo's 15-inch Gapmaster Slide-Mount Load Module was utilized during the unfolding of this heavy chair bank (6,608 lbs/3,000 kgs) on a wooden floor.

Gapmaster Aero-Casters were needed for the porosity of the wooden floor. Sometimes these chair banks are stored in a basement and installed using a lift system. This lift system will typically have a 0.39 inch/10mm gap and a 0.20 inch/5mm step between the floor and the lift.
